www.samueldesque.me

I have worked on engineering teams from 1 to 100s. After founding my first startup in college, I moved on to working for Volt in Copenhagen. I then moved to NYC and worked in an ad agency for well known brands. I then switched to work on a product full time at Dailymotion where I have worked on a complete remake of the partner backoffice, including home built stats and dashboards, an in-house assistant to query your data and receive support and more.

I also work on an app called Lokely as a side project. Lokely was fully developed in React-Native which has allowed to be present both on iOS and Android right away while minimizing development times. The backend is an API in Node on a home built auto-scaling architecture.

I am well versed in agile development - and interested in a broad stack of technologies. I believe no challenge is too big and nothing can't be done with the right mindset.

Interested in small teams with big challenges. Interesting in versatile development and open source projects. Curious about AI and the next big things.

Expertise

Languages

JavaScript, PHP, Python

Databases

MySQL, Mongo, Redis, Postgresql

Markup

HTML5, Less, Sass, CSS3, Twig

Frontend

React, React-Native, jQuery, Angular, Ember, Backbone

Backend

Node, Express (Js), PHP, Python, Eve (Py), Docker, Kubernetes

Data

SciPy, Numpy, Pandas, Spacy, NLTK, Jupyter notebook, machine learning model evaluation

Environment

Bash, Webpack, Gulp, Git, Browserify...

Open source

<http://salad-ui.com/> (UI toolkit)

Experience

Dailymotion

06/2015 - present

Role: Fullstack developer.
Technologies: React, Node, Scss, PHP, Python, Machine Learning, Mongo, Redis, Docker

Lokely

10/2015-present

Role: Co-Founder & CTO
Product: Recommendations app
Technologies: React-Native, Redux, Node, Mongo.

Domani Studios

01/2014 - 06/2015

Role: Front end developer.
Clients: Nintendo, Starwood, GreyGoose, Harman Kardon, House of Marley, Ahmad Tea.

Volt

03/2013-10/2013

Role: Full Stack developer.
Products: Wordpress website, html5 sales app, Backbone based admin tools, custom shop using Code Igniter.

Pixyt

06/2012-03/2013

Role: Founder & CTO
Product: Social website for photographers allowing them to build a portfolio.
Technologies: PHP (homegrown framework), Backbone.JS, jQuery.

Pierre Arnaud

06/2010-09/2010

Role: eCommerce developer
Technologies: PHP (homebuilt).

Welltec

04/2009-07/2009

Role: Junior developer
Products: sms gateway, contact parsing, data integrations and database maintenance.
